

ANUSH CHINNASAMY

Software Engineer · Java Backend · Generative AI

Chennai, India · +91-8667623498 · anushchinnasamy@gmail.com · LinkedIn · GitHub · LeetCode · Portfolio

PROFILE

Software Engineer with 2 years of experience building backend applications using **Java, Spring Boot, REST APIs, and SQL**, with hands-on expertise in microservices and system design through independent engineering projects. Experienced in designing scalable backend systems using **Redis, PostgreSQL, Kafka, API Gateway, and distributed service architectures**. Currently focused on **Generative AI** application development, including LLMs, embeddings, RAG, vector search, and AI-powered workflows. Strong foundation in **Data Structures & Algorithms, OOP, DBMS, and System Design**.

SKILLS

Programming Languages: Java, Python, C#, SQL, JavaScript/TypeScript

Backend: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Spring Security, REST APIs, Microservices

System Design: Microservices Architecture, API Design, Caching, Rate Limiting, Service Discovery, Scalability

Generative AI: LLMs, Embeddings, RAG, Vector Search, Prompt Engineering, Structured Outputs, AI Agents

Databases & Caching: PostgreSQL, MongoDB, Cassandra, Redis, Vector Databases

Cloud & DevOps: Microsoft Azure, Docker, Docker Compose, Azure DevOps, CI/CD, Git, GitHub, Maven

Frontend: React, TypeScript, Tailwind CSS, Framer Motion, GSAP

Testing & API Tools: JUnit, Integration Testing, Postman, Swagger/OpenAPI

EXPERIENCE

Software Engineer — Hexaware Technologies

Backend Engineer | Healthcare Insurance Domain · April 2025 – Present

- Develop and maintain backend applications using **Java 17, Spring Boot, Spring Data JPA, and Hibernate**, following modular and layered application architecture.
- Design and implement **RESTful APIs** for business workflows, integrating backend services with databases and external systems.
- Work with relational databases for data access, query development, schema changes, and backend application integration.
- Apply **OOP, clean coding practices, exception handling, and API design principles** to build maintainable backend services.
- Develop **JUnit test cases** for backend components and validate REST APIs using Postman and Swagger/OpenAPI.
- Collaborate with cross-functional teams to translate business requirements into technical implementations and support iterative feature delivery.
- Contribute to **Azure-based deployments and Azure DevOps CI/CD workflows** across the software development lifecycle.
- Currently expanding and applying **Generative AI concepts**, including LLMs, embeddings, RAG, prompt engineering, and AI-powered application workflows.
- Promoted to **Associate Software Engineer within 6 months**, ahead of the standard 9–12 month progression cycle, in recognition of training performance and delivery.

Tech Stack: Java 17, Spring Boot, Spring Data JPA, Hibernate, REST APIs, SQL, Azure, Azure DevOps, Git, JUnit, Maven

PROJECTS

AI / GENERATIVE AI

InternFlow AI — Internship Lifecycle & AI Workflow Platform

Node.js · TypeScript · Express · PostgreSQL · Prisma · Google Gemini · JWT

- Built an internship lifecycle platform with a **17-state workflow**, server-side RBAC, audit trails, NDA gating, and human-reviewable AI-assisted workflows.
- Implemented **9 AI actions** covering resume parsing, form prefill, confidence scoring, joining-form checks, SLA risk prediction, email drafting, and conversational chatbot capabilities using structured LLM outputs.
- Designed adapter-based integrations for external systems and maintained independent backend/frontend deployment boundaries for extensibility.
- Added role-based API coverage and auditability around AI actions so automated recommendations remain traceable and reviewable.

RecruitFlow AI — AI-Powered Recruitment Platform

Java · Spring Boot · Microservices · Kafka · RAG · pgvector · Ollama

- Built an **event-driven recruitment platform** using Spring Boot microservices for candidate management, job processing, matching, enrichment, workflows, and notifications.
- Implemented **RAG-based candidate ranking with pgvector and local LLM inference**, using asynchronous Kafka workflows to process matching and enrichment.
- Integrated **API Gateway, Eureka service discovery, centralized configuration, JWT security, rate limiting, distributed tracing, and resilience patterns** across services.
- Validated the end-to-end recruitment saga covering enrichment, vector backfill, shortlist generation, HR decisions, notifications, and audit tracking.

PROJECTS

JAVA · SPRING BOOT · SYSTEM DESIGN

SpicyEat — Food Ordering & Delivery Platform

Java · Spring Boot · Microservices · PostgreSQL · Redis · Kafka · Docker

- Built a **microservices-based food ordering platform** covering authentication, menu, cart, orders, payments, delivery, offers, rewards, and notifications.
- Implemented **API Gateway, Redis caching, service-level PostgreSQL data ownership, and Kafka-based event-driven workflows** for decoupled communication.
- Applied **idempotency, concurrency control, rate limiting, resilience, and transactional event processing** across distributed workflows.
- Enforced clear service boundaries with each service owning its data while using synchronous calls for immediate responses and asynchronous events for decoupled workflows.
- Designed the platform around independent service responsibilities and gateway-only external access, keeping business logic inside the appropriate services.
- Deployed the complete application as a live platform and prepared the multi-service system for containerized and cloud execution.

Ticket Booking System — Movie & Event Booking Platform

Java · Spring Boot · Microservices · API Gateway · PostgreSQL · Docker

- Built a **microservices-based ticket booking platform** with dedicated API Gateway, booking, and event services for movie and event reservations.
- Implemented **seat availability and concurrent booking control** to prevent duplicate reservations under simultaneous booking requests.
- Designed service boundaries and API-driven communication around booking and availability workflows, with containerized execution using Docker Compose.
- Applied backend validation around **consistency, availability, and safe concurrent access** across reservation flows.
- Organized shared backend components through a reusable common library while keeping booking and event responsibilities separated by service.
- Structured the booking flow to make availability checks and reservation state explicit, supporting predictable behavior under concurrent access.

TripMeter — Rider Earnings & Cost Analytics Platform

Java · Spring Boot · PostgreSQL · Redis · JWT · Docker

- Built a **Spring Boot modular-monolith backend** for calculating rider earnings, fuel/charging costs, maintenance, EMI, monthly growth, and EV break-even analysis.
- Designed feature-level boundaries using **PostgreSQL, Redis, JWT authentication, rate limiting, and a transactional outbox/poller** for background processing.
- Implemented independently testable domain calculators for **mileage, EMI, growth, EV breakeven, and benchmarking** with explicit edge-case handling.
- Kept raw rider entries immutable and derived analytics from source data, separating calculation logic from data-access workflows for maintainability.
- Added document-expiry reminders, service-due calculations, and privacy-preserving benchmark logic as part of the domain workflows.
- Provided API documentation, automated testing support, and container-ready deployment artifacts while intentionally keeping the architecture as a modular monolith.

EDUCATION

Sri Krishna College of Engineering and Technology

Bachelor of Engineering — Electrical and Electronics Engineering · 2020 – 2024 · **CGPA: 8.75 / 10**

Relevant Coursework: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

CERTIFICATIONS & AWARDS

Microsoft Certified: Azure Developer Associate (AZ-204) · Microsoft Certified: Azure Fundamentals (AZ-900) · Rockstar of the Month — Hexaware Technologies
